

Rev 1.0

Garden Controls Cycle Timer

This Cycle Timer is designed to execute repetitive and constant cycles in a grow room. The timer controls any 120V (up to 12A) equipment such as irrigation pumps, fogger, fans or CO₂ generators on periodic cycles. You may select ON times from 1 to 60 minutes and OFF times from 10 minutes to 12 hours. This controller includes a photocell to detect day and night periods and a sliding switch to select among 3 operation modes: day only, night only or 24 hours.

Installation

For easy set-up and readings, install the timer on a wall with the included hardware, 4 to 5 feet off the ground. Plug output cord (piggy back cord) into a 120V electrical outlet. Then, plug your equipment into the output cord (piggy back cord).

Settings

Simply rotate the knobs to select ON time and OFF time. Then, slide the switch to select the operating mode needed among 3 available options: Day, 24-hour or Night.

By using Garden Controls Cycle Timer, you insure a precise control of your equipment and no time lag. Precision is never compromised with Garden Controls!!
